Rev. 1.02

IMPORTANT NOTICES

1. Legal and Compliance Statements

1.1. Regulatory Compliance:

This product has been tested and found to comply with the requirements set forth by regulatory authorities for the regions in which it is sold. These requirements may include, but are not limited to, compliance with the following:

- Federal Communications Commission (FCC) Rules, United States
- Conformité Européenne (CE) Marking, European Union
- Industry Canada (IC) Standards, Canada
- Other applicable regional or national regulations and standards

1.2. Safety Precautions and Guidelines:

Refer to the Safety Precautions and Warnings section of this manual for detailed information on safe use, handling, and maintenance of this product. Failure to adhere to these guidelines may result in personal injury or damage to the product and void the warranty.

2. Disclaimers

Deepry does not warrant that this product is error-free or that it is compatible with products manufactured by any person or entity other than Deepry.

Deepry is not responsible for damages or injuries caused by your use or inability to use the product, by the interaction of the product with products manufactured by others, or by errors in information utilized by the product supplied by third parties.

Unauthorized Software and Modifications:

The user is strictly prohibited from installing, copying, or using pirated or unauthorized software, applications, or modifications on the Deepry MFD. The manufacturer will not be held responsible for any damages, issues, or legal consequences resulting from the use of pirated or unauthorized software.

Violation of this policy may void the warranty, result in termination of support services, and expose the user to legal liabilities. Users are responsible for ensuring that all software installed on the Deepry MFD is obtained from legitimate sources and complies with applicable licensing terms and conditions.

By using this product, you acknowledge and agree to comply with all applicable laws, regulations, and terms related to software licensing and intellectual property rights protection. Failure to do so may result in legal consequences, damages, or voiding of the product warranty.

3. Copyright Notice

All rights reserved. No part of this user manual may be reproduced, distributed, transmitted, or translated in any form or by any means, electronic or mechanical, including photocopying, recording, or any information storage and retrieval system, without the prior written permission of the manufacturer. All product names, logos, and brands mentioned in this manual are the property of their respective owners.

SAFETY INSTRUCTIONS

Be sure to observe the safety instructions

Be sure to observe the following instructions to prevent danger to yourself and others and damage to your property. The levels of danger and damage that may result when displayed contents are ignored or the equipment is used incorrectly are classified and indicated in this manual as shown below. Pay sufficient attention to those dangers and damage.

 WARNING	Indicates a condition that can cause death or serious injury if used incorrectly.
 CAUTION	Indicates a condition that can cause minor or moderate injury or damage to property if used incorrectly.
 Warning, Caution	 Prohibitive Action
	 Mandatory Action

 WARNING	
	Use the proper fuse. Use of a wrong fuse can result in serious accident or malfunction.
	Never disassemble or modify the equipment. Fire, electrical shock or injury can result.
	Immediately turn off the power at the switchboard if water leaks into the equipment. Fire or electrical shock can result.

 CAUTION
<p>About plotting accuracy</p> <p>The plotting accuracy and response speed of this TT meet the International Maritime Organization (IMO) standards. Tracking accuracy is affected by the following.</p> <p>Tracking accuracy is not affected by slow course change of own ship. However, abrupt course change affects all tracking targets and one to two minutes is required to restore full accuracy for those targets. (The degree of impact depends on gyrocompass.)</p>

 WARNING	
	Do not place liquid-filled containers on the equipment. Fire or electrical shock can occur if liquid spills into the equipment.
	Never remove cover. High voltage is used inside. Electrical shock may result if you touch high voltage components. In case of malfunction, contact your dealer.
	Immediately turn off the power at the switchboard if the equipment is emitting smoke or fire. Fire or electrical shock can result. Be sure to contact your dealer.
	Do not operate the equipment with wet hands. Electrical shock can result.

1 SYSTEM CONFIGURATION

1.1 Configuration with chartplotter

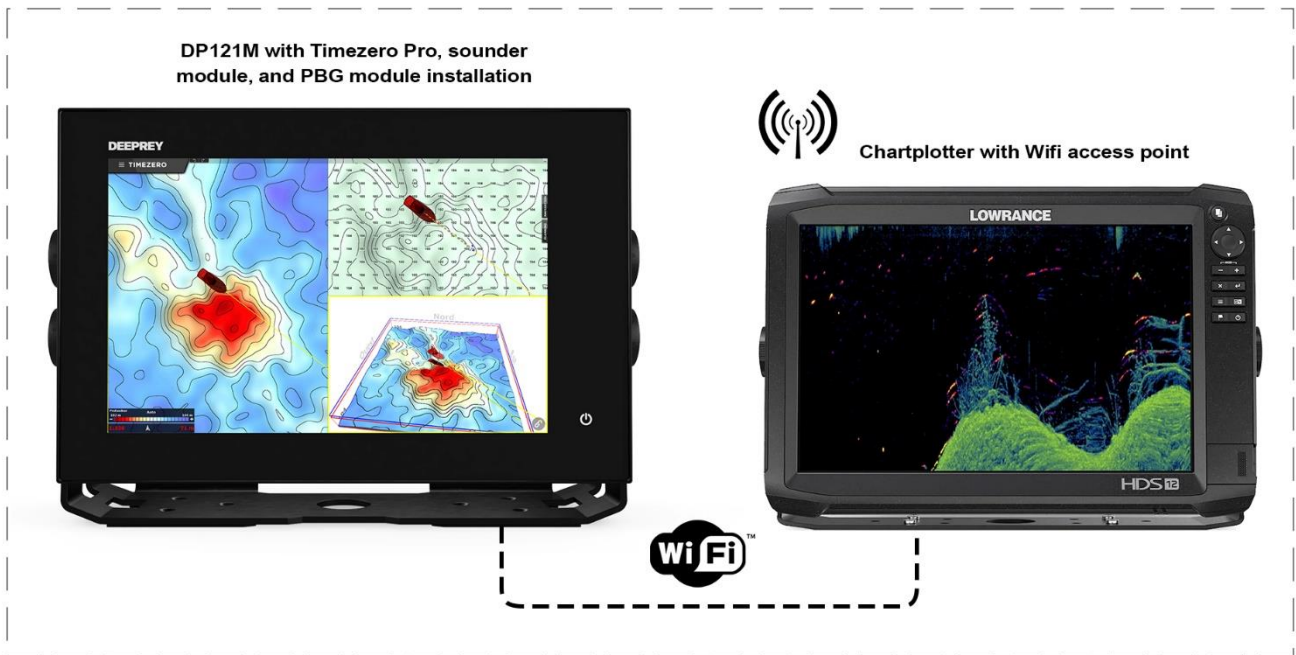

1.1.1 Any chartplotter

1. NMEA2000 Connection

The DP-MFD offers versatile connectivity to any sounder. Whether it's from an older or newer generation, using protocols like NMEA2000, NMEA0183, WIFI or Ethernet. By combining this hardware with software like Timezero, you'll be able to create your own detailed bathymetric maps of your fishing spots.

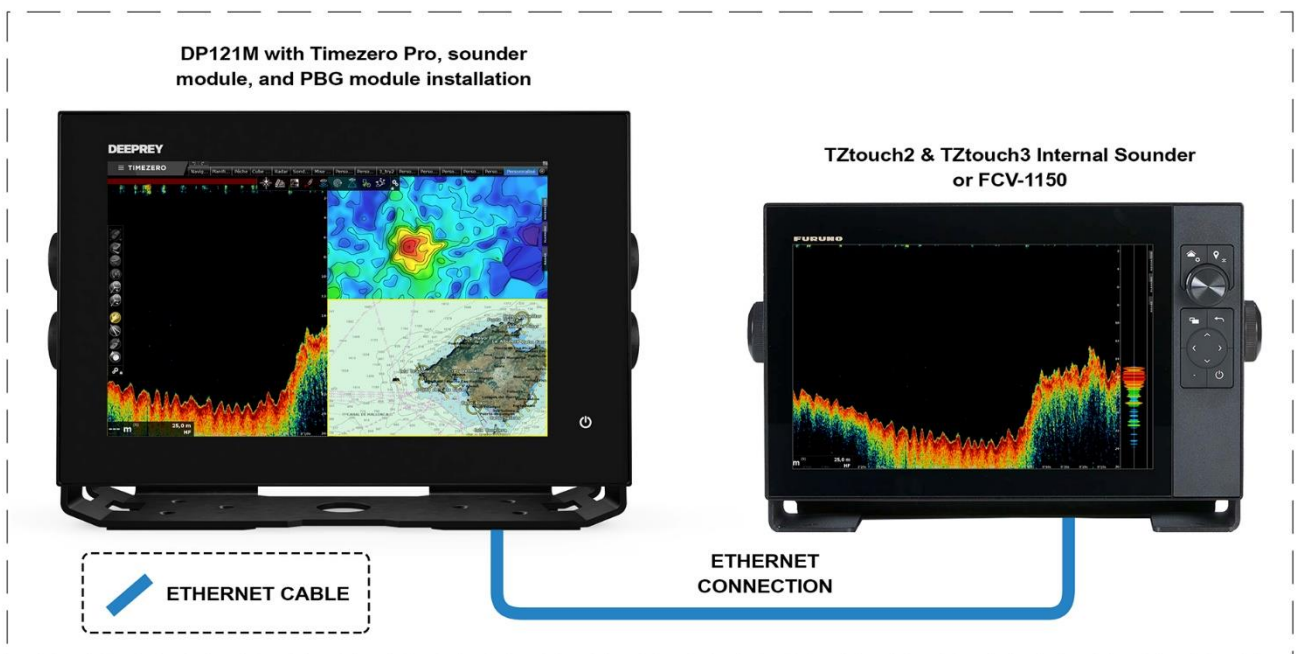

2. WIFI Connection

1.1.2 Chartplotter compatible with Timezero

With a chartplotter compatible with Timezero, such as the Tztouch2, Tztouch3, or the FCV-1150, and a simple Ethernet connection, you can have complete access to your sounder. This will allow you to access the sonar view on the DP-MFD and make your bathymetric recordings in real-time for a better understanding of your fishing spots.

1.2 Configuration with blackbox

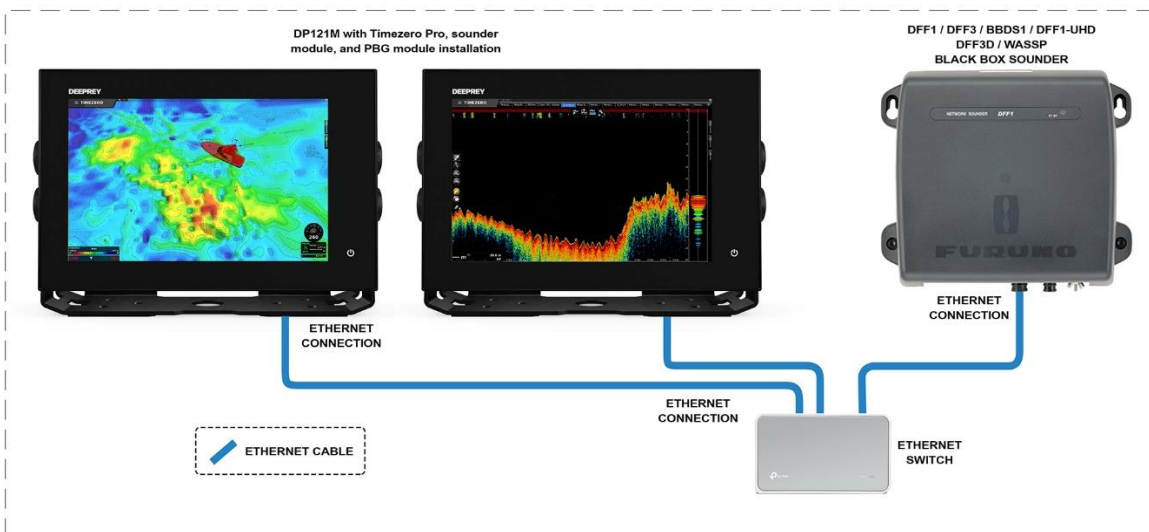

1.2.1 One display unit

With a Timezero-compatible black box sounder, such as DFF1, DFF3, BBDS1, or DFF1-UHD, and a simple Ethernet connection, you gain full access to your black box. This allows you to configure it and access various sonar views provided by the black box. Additionally, you can conduct real-time bathymetric surveys of your fishing spots and more effectively identify new spots.

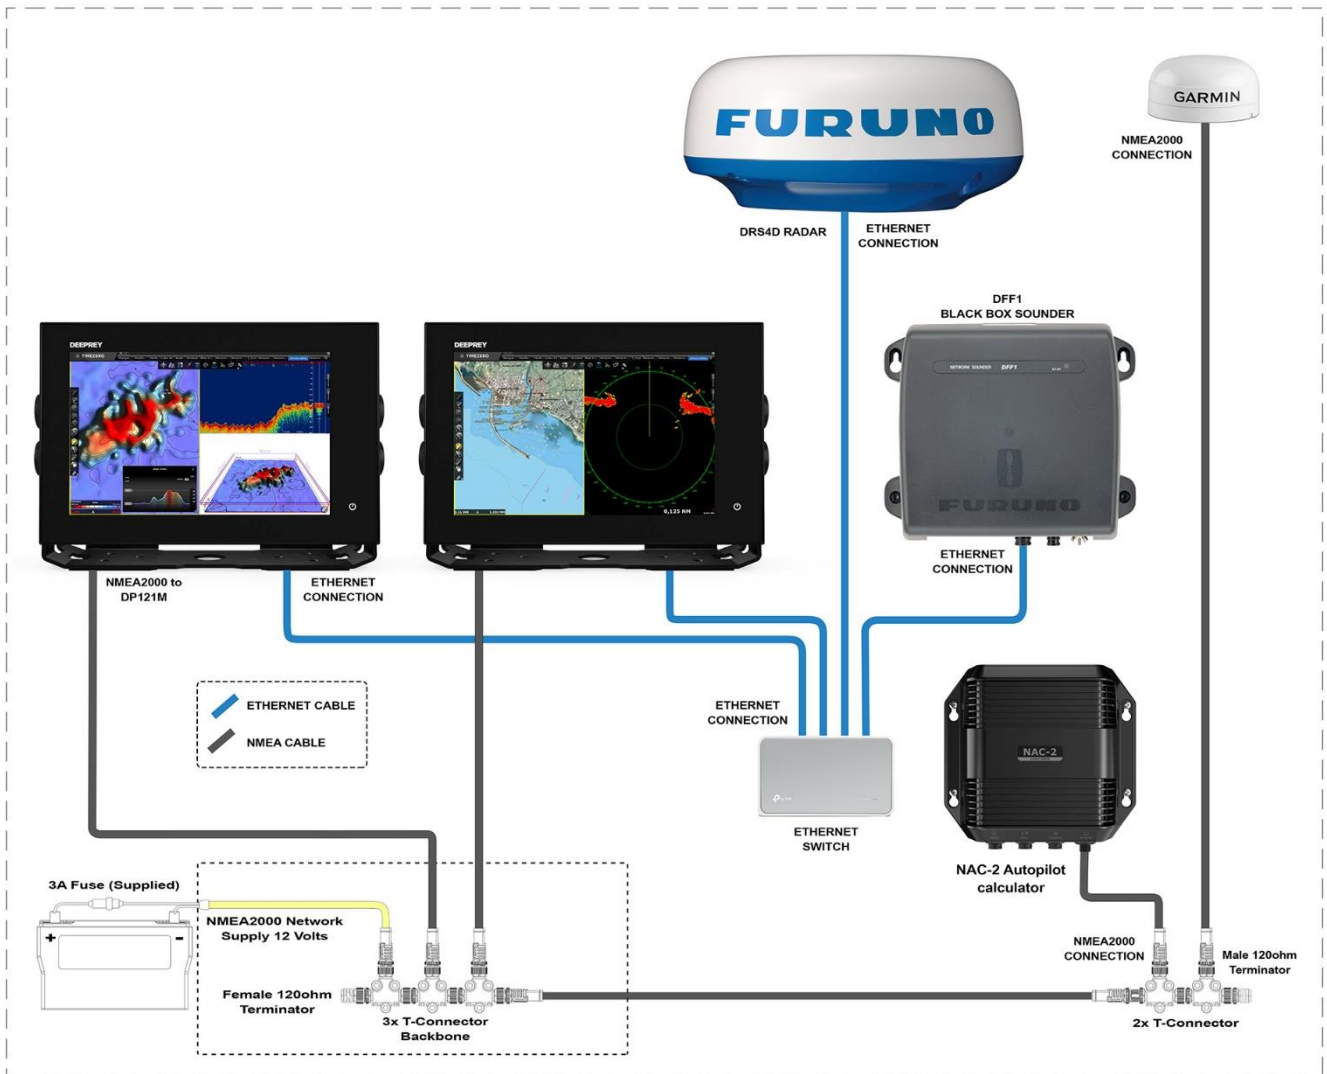

1.2.2 Multiple display units

You can connect multiple DP-MFD units to a blackbox or a Timezero-compatible chartplotter using an Ethernet switch, allowing you to display sonar data and other equipment on multiple screens. Additionally, you'll be able to manage this information simultaneously from all screens.

1.3 Advanced configuration

The installation of Timezero and the sounder, radar, and PBG modules enables you to connect Furuno radars and Timezero-compatible sonars via Ethernet. Additionally, you can establish connections with an autopilot computer and an external GPS through Nmea2000. The DP-MFD will allow you to control all equipment, synchronize all received data, and display a professional and accurate navigation interface.

2 EQUIPEMENT LIST

2.1 Standard supply

Name	Qty.	Remarks
Display unit	1	
Power supply	1	
Flush mount tool	1	
Flush mount gasket	1	
Multi-functional cable	1	10POS COM Cable
Operator's manual	1	

2.2 Optional supply

Name	Remarks
NMEA2000 cable	
NMEA2000 T-connector	
NMEA2000 starter kit	

3 INSTALLATION

3.1 Mounting

3.1.1 Place suitable for mounting

When selecting a mounting location, keep the following in mind:

- Mount the equipment where shock and vibration are minimal.

- Keep the equipment away from electromagnetic field generating equipment such as motors and generators.
- The temperature at the mounting location shall be between -15°C and $+45^{\circ}\text{C}$.
- The humidity at the mounting location shall be 91% or less (at 40°C).
- Locate the equipment away from exhaust pipes and exhaust ports.
- The mounting location shall be well ventilated.
- Choose a location that allows easy access for maintenance and inspection. Leave servicing space around the equipment, as shown in the outline drawing at the end of this manual.
- Do not mount the equipment on the overhead.
- A magnetic compass will be affected if the equipment is placed too close to it. Keep the compass safe distance shown in the Safety Instructions.

3.1.2 Flush mount

Read the contents of this section carefully and mount this equipment on a flat surface. Improper mounting may cause failures with the display screen of this equipment.

1. Screw the wing bolts onto the two mounting brackets.

2. Check that the mounting surface is flat, even and without curve and make a mounting hole at mounting location by using the enclosed template for DP-MFD.
3. Attach the mounting gasket along the edges of the mounting hole, or to the backside of this equipment.
4. Connect all cables at the rear side of the DP-MFD.

5. Insert the DP-MFD body into the mounting hole made at step 2, and fix flush mounting brackets and main body with bolts (4 pcs). Manually and securely tighten wing bolts (four in total) attached to the flush mounting bracket so that the protector of the flush mounting assembly touches the wall.

3.2 Wiring

3.2.1 Main body (rear) interface

Note:

- Protect unused connectors by covering them with the provided caps.
- To prevent cable and connector deterioration, plug or unplug them carefully

3.2.2 Multi-Functional cable (10POS COM Cable)

Use the multi-functional cable to connect an external powered speaker and two NMEA0183 equipment. The multi cable has 10 core wires.

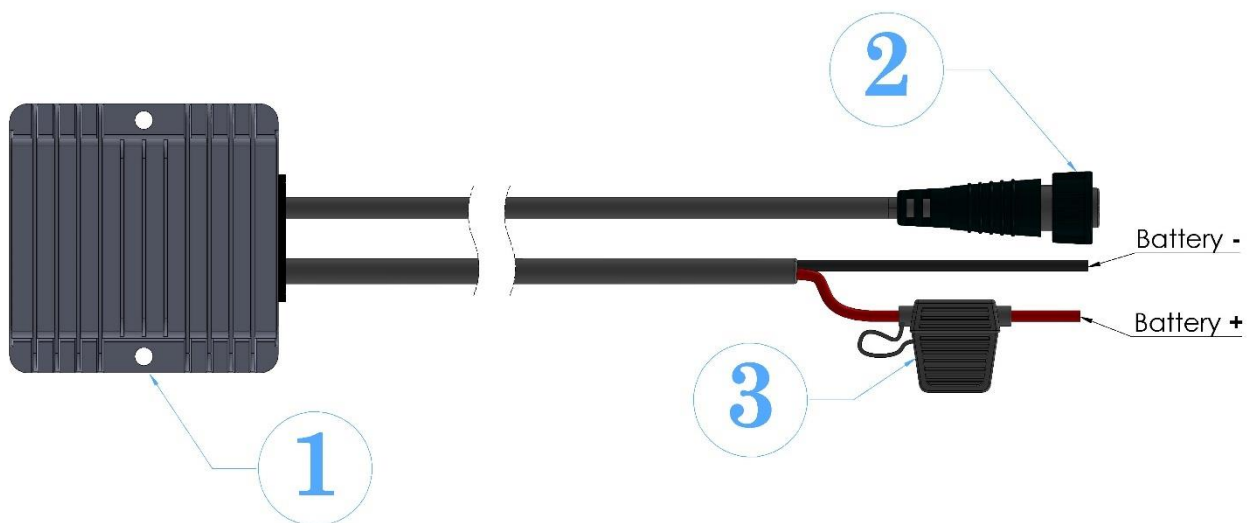

Refer to the table for pin arrangement on the multi cable

Connector	Color	Remarks			
1	TX_01	Black	Nmea0183_01 Tx	RS232	
2	RX_01	Brown	Nmea0183_01 Rx		
3	TX_02	Red	Nmea0183_02 Tx	RS232	
4	RX_02	Orange	Nmea0183_02 Rx		
5	AUD L+	Yellow	Audio output Left +	Audio outputs	
6	AUD L-	Green	Audio output Left -		Left
7	AUD R+	Blue	Audio output Right +		Right
8	AUD R-	Gray	Audio output Right -		
9	GND_01	White	Nmea0183_01 Ground		
10	GND_02	Pink	Nmea0183_02 Ground		

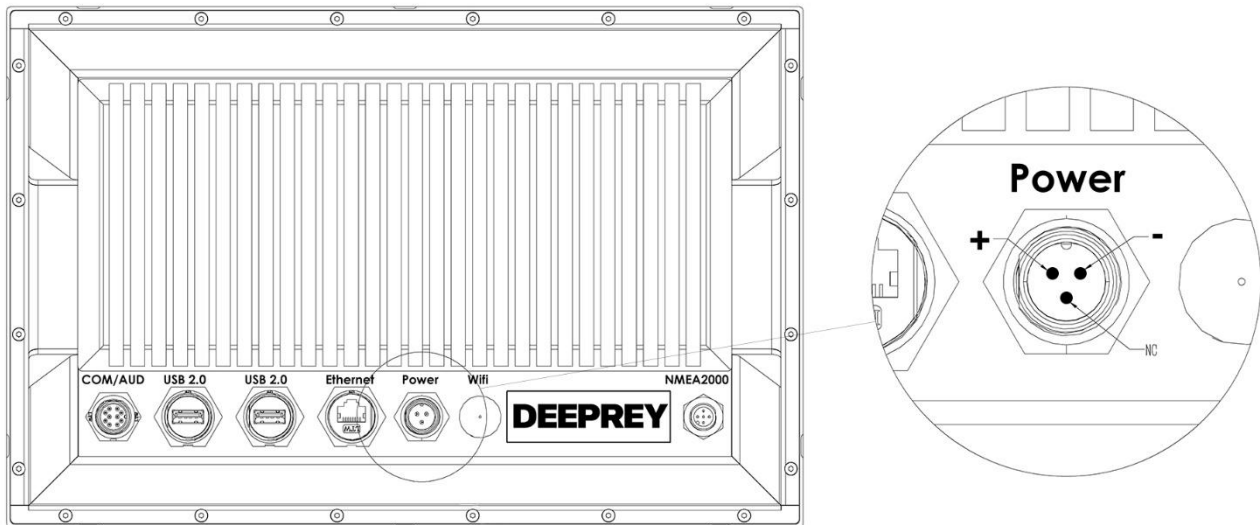

3.2.3 Power connection

1. Locate the power cable included with the DP-MFD MFD.
2. Connect the power cable to the power input on the back of the MFD.
3. Route the other end of the power cable to the vessel's power source (12V or 24V DC), ensuring that the cable is properly secured and protected from damage.
4. Connect the power cable to the power source, observing the correct polarity (red wire to positive, black wire to negative).

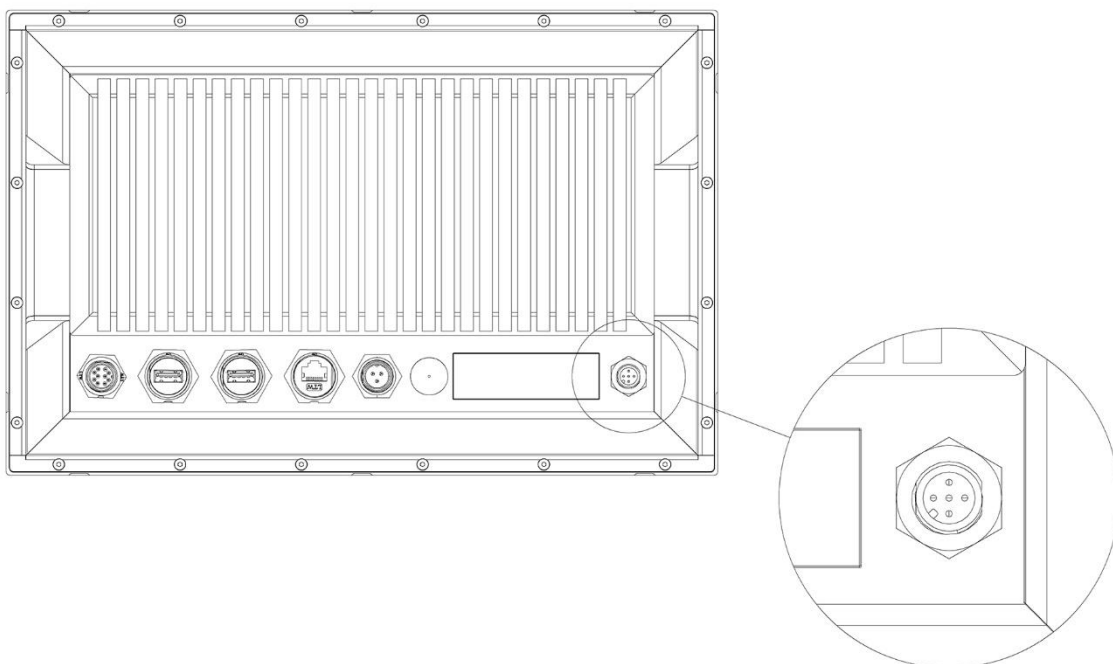

1. DC stabilizer 2. power connector 3. fuse (10 A)

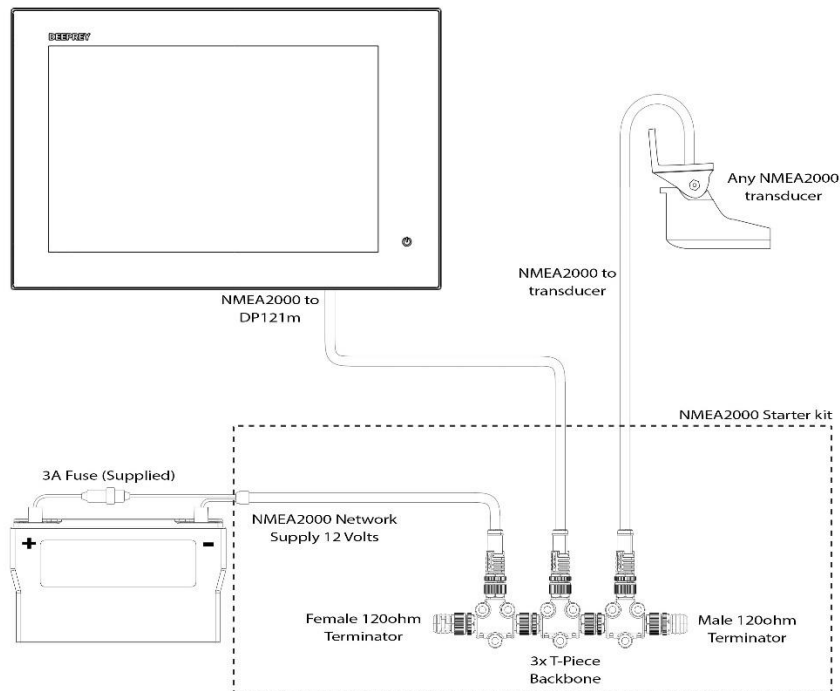

Caution:
 Use the proper fuse.
 Use of an incorrect fuse may damage the equipment.

3.3 NMEA2000 Connector

This connector can share data with NMEA2000 compatible devices.

3.3.1 NMEA2000 network connection

Minimal Equipment Installation Example 1: A Schematic Illustration

- Requires network power source and termination resistor.
- DP-MFD requires 12 VDC. Not adaptive to 24 VDC.

Caution:

Use the proper fuse.

Use of an incorrect fuse may damage the equipment.

3.3.2 NMEA2000 pin definition

Connector	Connector terminal color	Remarks	
1	Shield	Black	Ground reference and shielding
2	VCC	Red	Power supply for the NMEA2000 network
3	Ground	Black	Signal ground reference
4	Can_H	White	High signal of the CAN bus
5	Can_L	Blue	Low signal of the CAN bus

The diagram shows the pinout of the NMEA2000 connector. It is a circular connector with 5 pins. Pin 1 is the shield, pin 2 is VCC, pin 3 is ground, pin 4 is Can_H, and pin 5 is Can_L.

3.4 NMEA2000 PGN

The DP-MFD converts incoming NMEA 2000 PGNs from the input into NMEA 0183 sentences, allowing them to be interpreted by marine software. It also converts data sent by the software back into NMEA 2000 PGNs for output purposes.

3.4.1 Input PGN

PGN	Description	Converted to Nmea 0183 sentences

4 BASIC OPERATION

4.1 Controls

The DP-MFD is equipped with a touchscreen and a touch button for powering the device on or off.

4.1.1 Power button

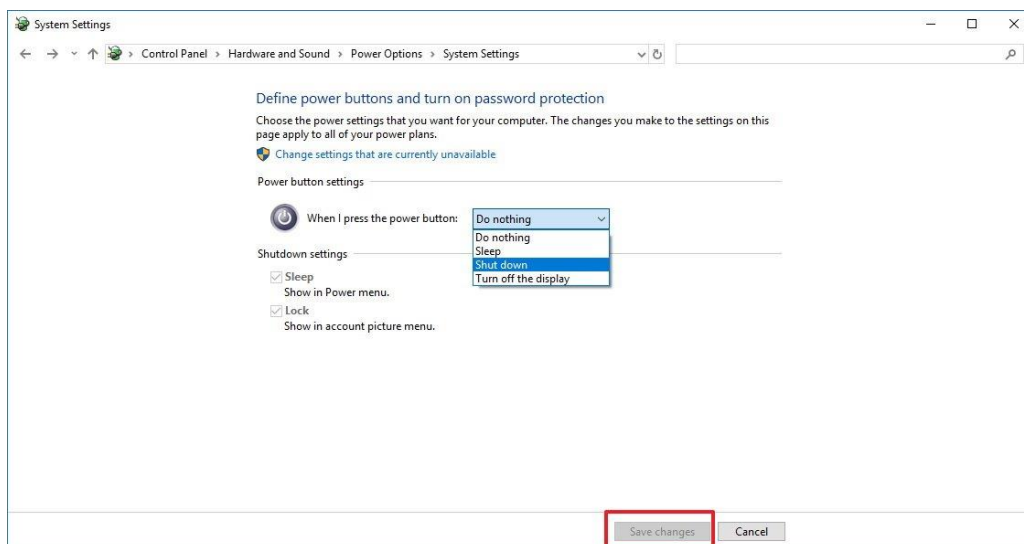

Upon powering up the DP-MFD, the power button illuminates in orange, indicating that the device is in standby mode. A two seconds touch of the power button activates the device, and the power button LED turns off.

To shut down the device, press the power button for two seconds; this will initiate the shutdown procedure. If you maintain the touch for more than 7 seconds, the device will enter a forced shutdown mode and power off (not recommended). This manual procedure is intended for Windows.

**Note:**

You can change the default action of the power button:

3. Open [Control Panel].
4. Click on [System and Security].
5. Under "*Power Options*," click the [Change what the power buttons do] link.
6. Using the drop-down menu for "*When I press the power button*" select the action you want:
 - *Do nothing.*
 - *Sleep.*
 - *Hibernate.*
 - *Shut down.*
 - *Turn off the display.*
7. Click the [Save changes] button at the bottom of the window.

Once you completed the steps, every time you press the power button your computer will respond to the new action.

4.1.2 Touch control

A finger or two are used for touch control. The basic operations are as shown below.

	Touch control	Function
 RIGHT SWIPE	Slide your finger across the screen to the right side.	Scroll or pan quickly
 LEFT SWIPE	Slide your finger across the screen to the left side.	Scroll or pan quickly
 DOUBLE SWIPE	Perform a double-finger swipe across the screen.	Show your desktop, view all open windows, or switch applications
 PINCH	Touch surface with two fingers and bring them closer together	Scale down
 SPREAD	Touch surface with two fingers and move them apart.	Scale up
 ROTATE	Perform a two-finger rotation across the screen.	Adjust view (rotate)
 TAP	Briefly touch surface with fingertip.	Select
 DOUBLE TAP	Rapidly touch surface twice with fingertip.	Adjust view (zoom in)
 PRESS HOLD	Touch surface for extended period of time	Display commands

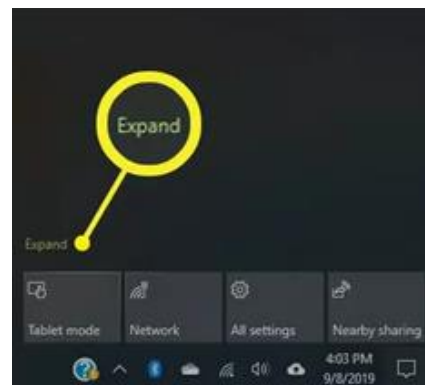

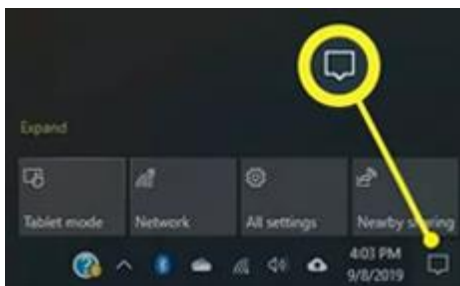

Notes for touch control:

- A large amount of waterdrops on the screen can cause improper operation. Waterdrops on the screen can cause slow touch response. Wipe the screen to remove the waterdrops before use.
- This equipment uses a capacitive touch screen. Tap the screen with your fingertips directly. Do not use sharp objects (needle, pen, nail) or a stylus pen. Also, be careful not to scratch the screen.
- Tapping the screen with gloved fingers may cause improper operation.
- Do not operate the equipment with objects placed on the screen. The touch control can fail to work properly if objects other than fingertips are touching the screen.
- Keep the equipment away from a radio antenna, fluorescent light, solenoid valve or other electronic devices to prevent false operation from noise.
- The panel is made of glass. If the panel is cracked or damaged, do not touch it or try to repair it yourself. Damage caused by improper handling will void the warranty.

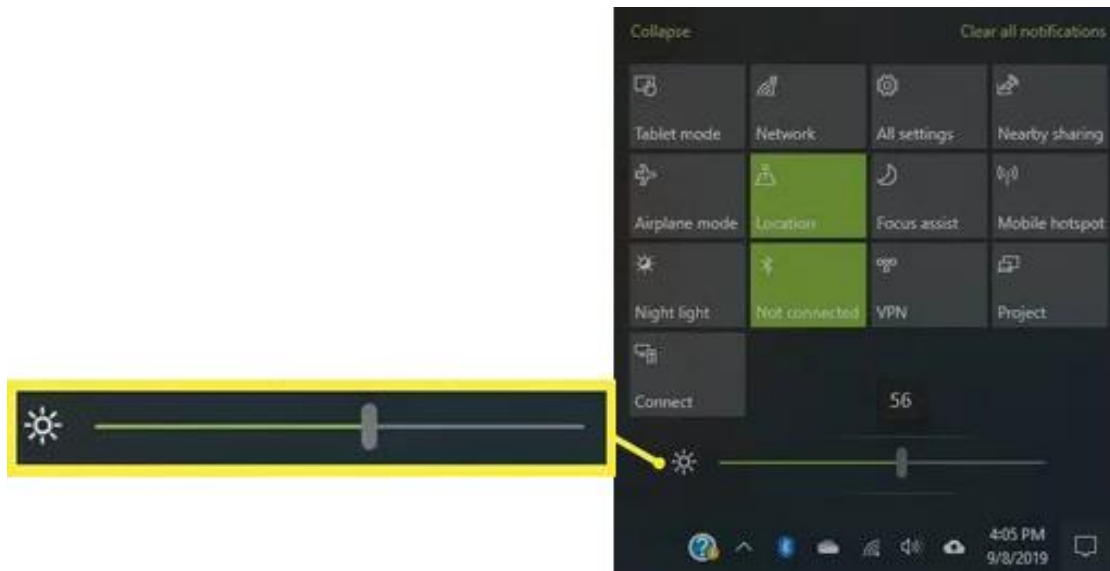

4.2 Adjust Brightness

How to adjust the brilliance of display:

1. Select the **Notifications** icon in the bottom-right corner of the screen to open the **Action Center**.
2. Select **Expand** in the **Action Center**.

3. Press the brightness button with the sun icon on it to cycle through five preset screen brightness levels or drag the slider next to the sun icon. The lowest possible brightness setting is 0 percent, while 100 percent is the highest.

- Exit the Action Center to save the setting.

-------------------------------	-----

OPERATING ENVIRONMENT	
TEMPERATURE RANGE	Operating: -10 to 45°C, storage: -20 to 80°C
RELATIVE HUMIDITY	5%~95% @ 40° C, non-condensing
VIBRATION	5-500 Hz, 0.026 G ² /Hz, 2.16 Grms

(*)

6 BIOS SETUP

6.1 Entering the BIOS

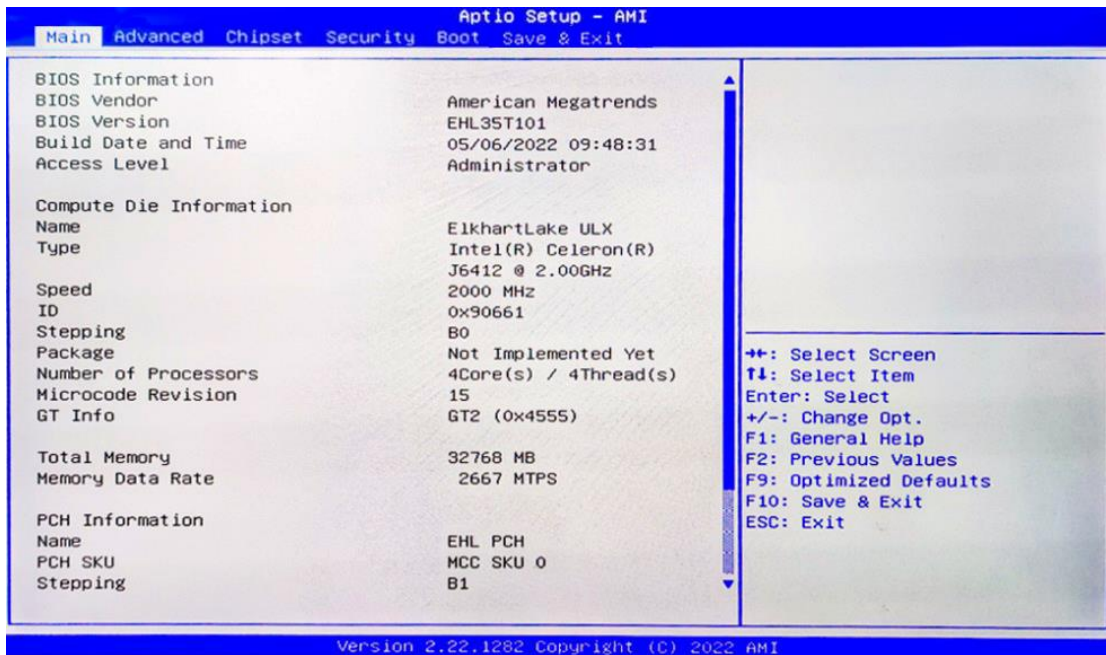

Turn on the DP-MFD and press <Delete> key to enter the BIOS settings.

If the computer has been turned on, continuously press the <F11> key, then select "Enter Setup."

BIOS Hotkeys		
F9	F10	ESC
restore to factory settings	save changes and exit	exit the BIOS without saving changes

6.2 Main setup

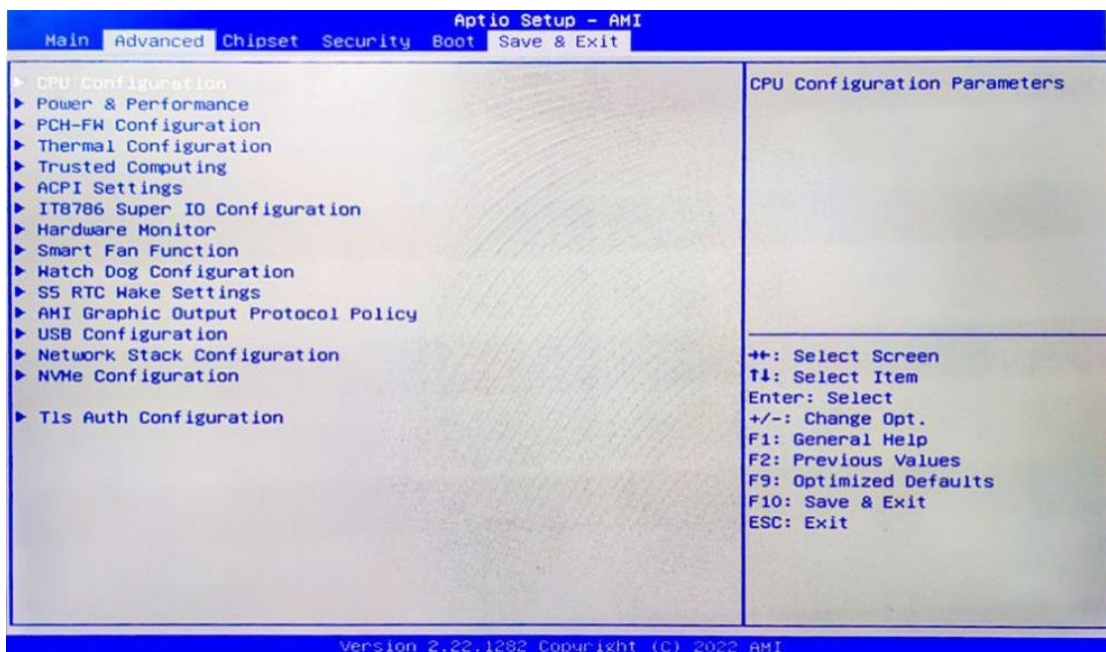

Upon entering the BIOS Setup utility, your initial encounter will be with the Main Setup screen. Displayed below is the Main BIOS Setup screen. You can easily navigate back to the Main setup by choosing the Main tab.

System Date: Adjusts the date using the MM/DD/YY format.

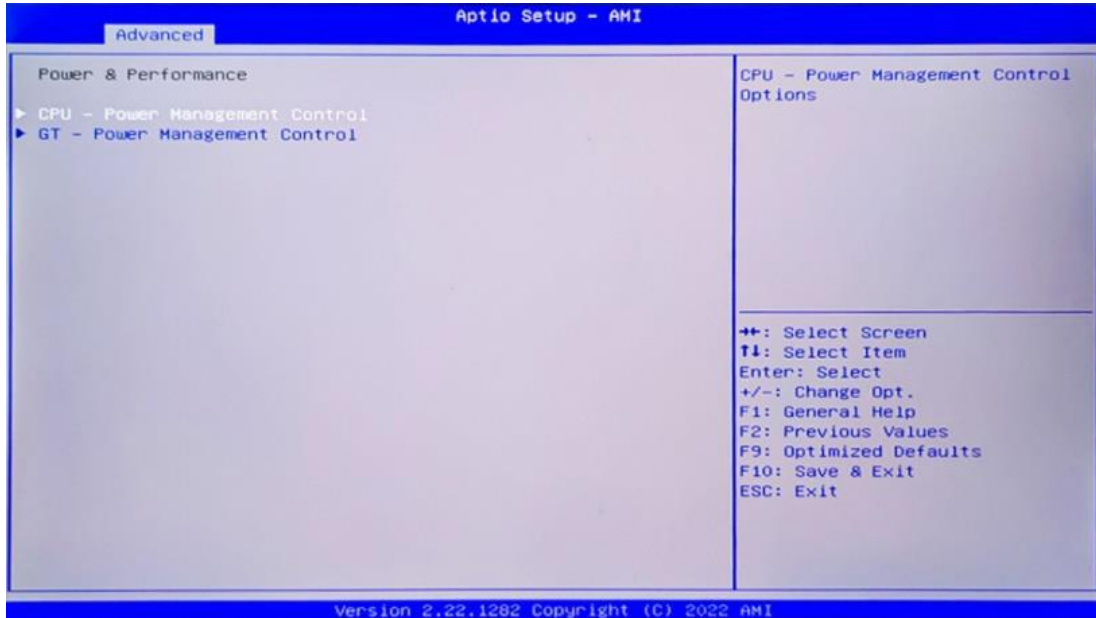

System Time: Configures the time using the HH:MM:SS format.

6.3 Advanced settings

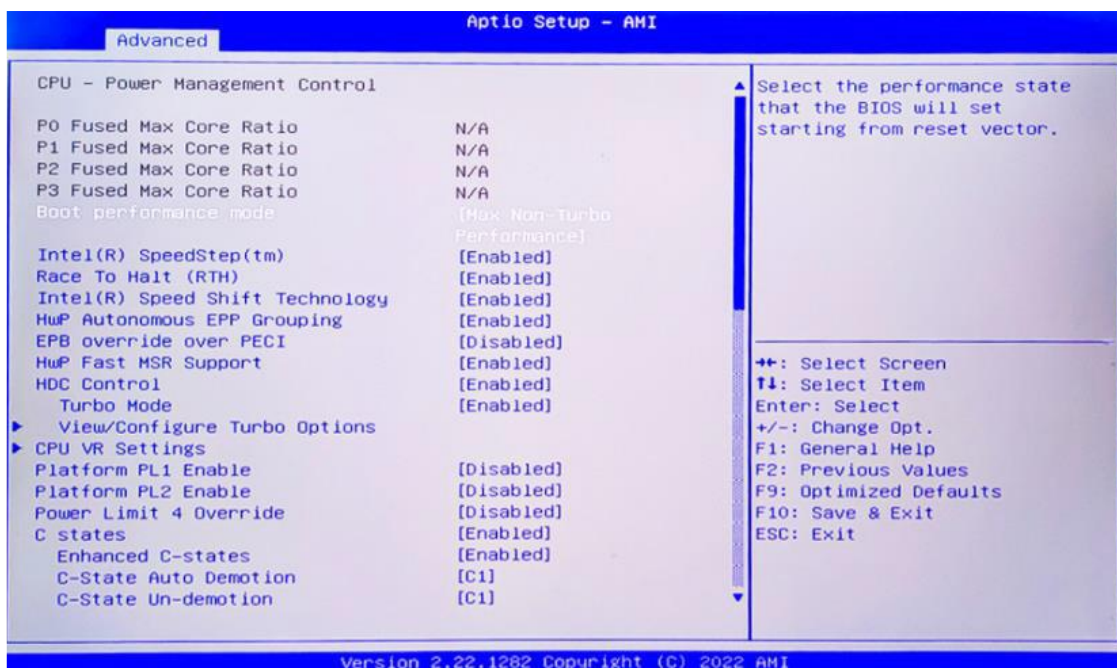

Select any of the items in the left frame of the screen. The advanced sections allow you to configure, improve and set up system features according to the preference of the CPU Configuration. All Advanced BIOS Setup options are described as follows.

6.3.1 Power and performance

CPU-Power Management Control
 GT-Power Management Control

6.3.2 CPU-Power Management Control

Intel® SpeedStep®(TM):

Enhanced Intel SpeedStep® Technology enables the operating system to control multiple frequencies and voltage points for optimal performance and power efficiency.

Intel® Speed Shift Technology:

An energy-efficient frequency control method by the hardware rather than relying on OS control. Processor decision is based on the different system constraints for example Workload demand, and thermal limits while taking into consideration the minimum and maximum levels and activity window of performance requested by the operating system. Default enabled.

Turbo Mode:

The Turbo mode refers to Nehalem's "Integrated Power Gate" power management technology, which allows running off some cores and adding power to the others so that they run at a higher frequency. The capacity of the entire CPU remains unchanged, and the efficiency of the CPU is optimized. Default enabled.

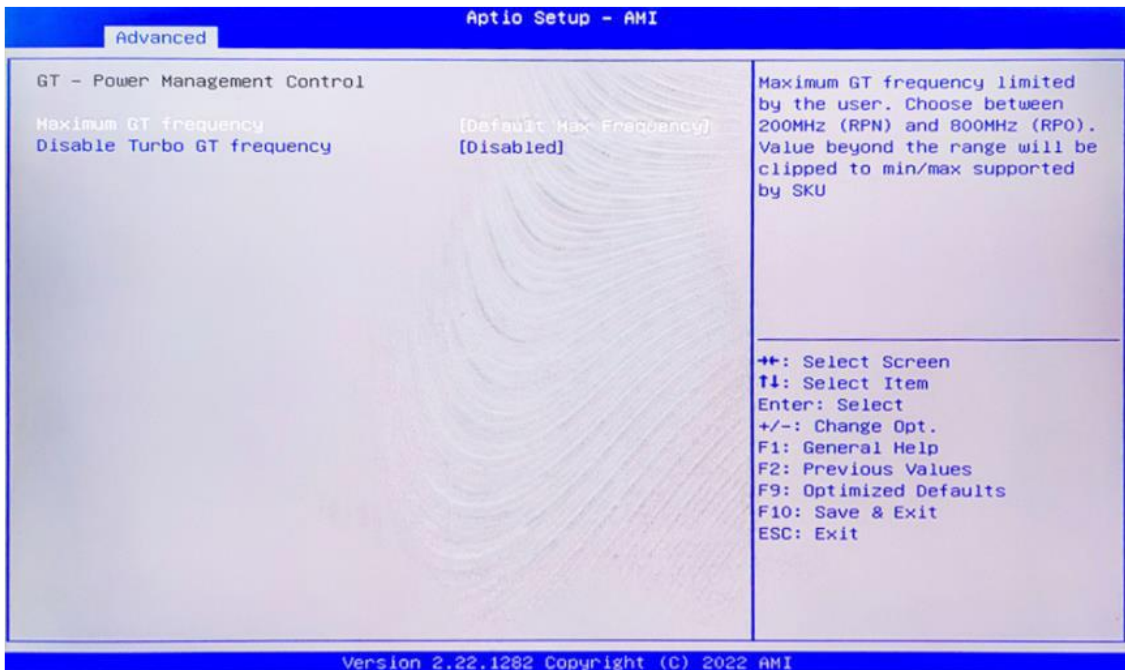

C states:

Idle States (C-states) are used to save power when the processor is idle. C0 is the operational state, meaning that the CPU is doing useful work 100% load. C1 is the first idle state, C2 the second, and so on, where more power-saving actions are taken for numerically higher C-states. C1 to C3 cuts off the clock inside the CPU, and C4 to C6 reduces the CPU voltage. Default enabled.

Enhanced C states:

C1 to C3 cuts the clock inside the CPU. C4 and C6 mode reduces CPU voltage. Features two way "Enhanced" mode, enable by default.

6.3.3 GT-Power Management Control

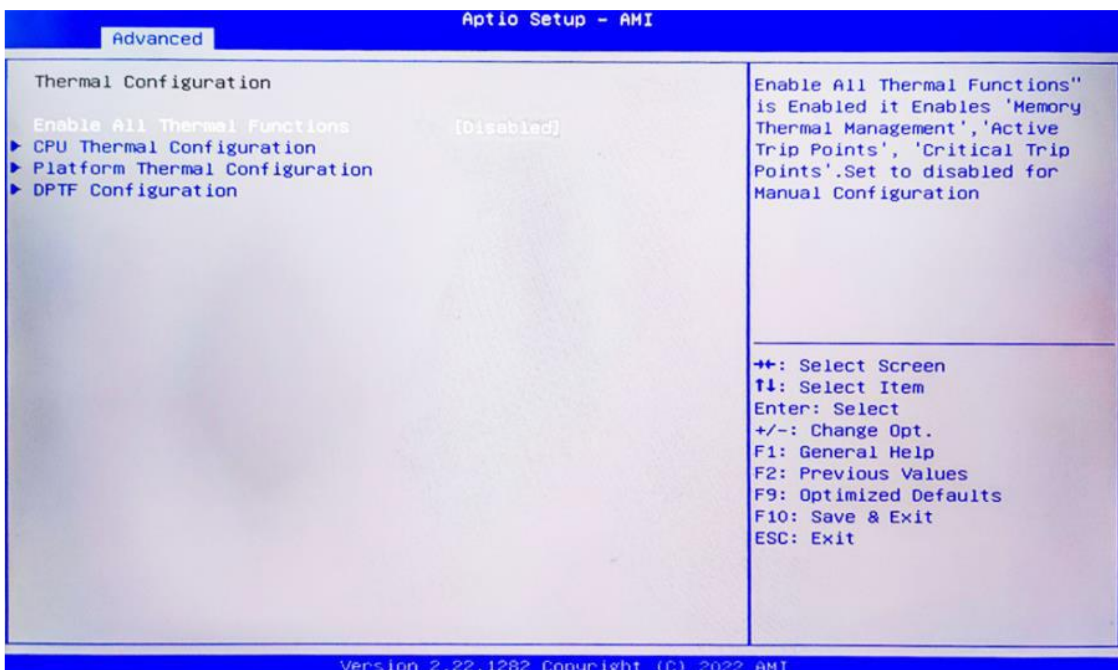

Maximum GT frequency:

Maximum GT Frequency, Default max frequency.

Disable Turbo GT frequency:

Disable Turbo GT Frequency mode, Default disabled.

6.3.4 Thermal Configuration

Enable All Thermal Functions

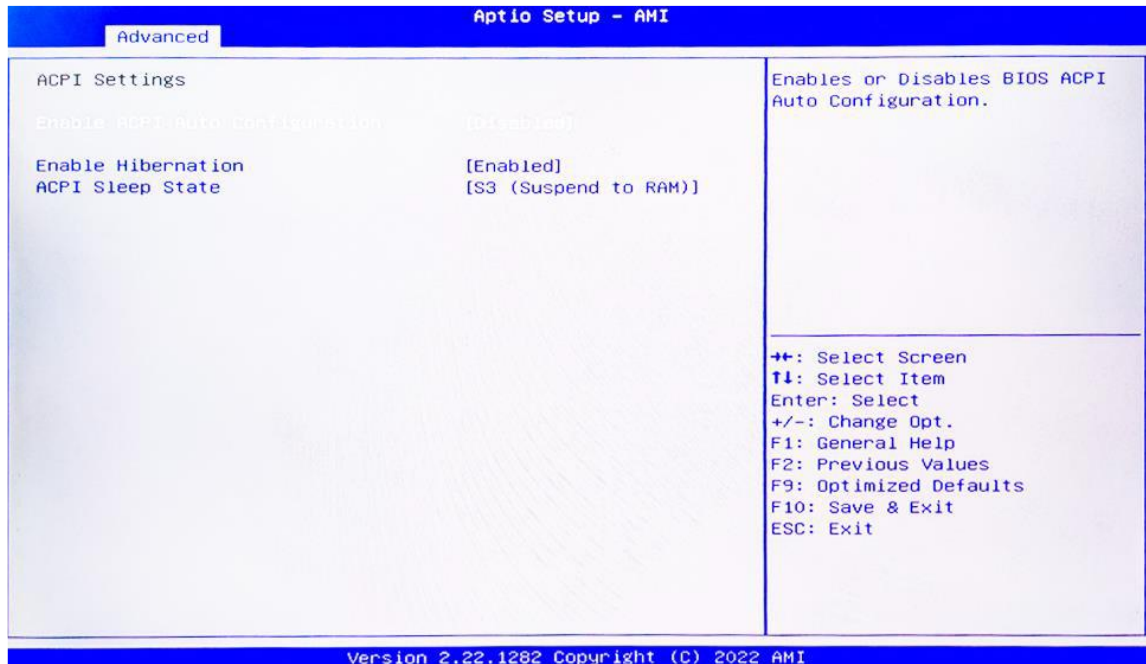

CPU Thermal Configuration:

Unlocks the temperature setting, the "Tcc Activation Offset" is the temperature adjustment option, the highest temperature is 105°C. Change the temperature by minus the number of degrees you wish to change. For example, minus 0(105-0) to set the temperature at 105°C, minus 20(105-20) to set the temperature at 85°C.

Platform Thermal Configuration

DPTF Configuration

6.3.5 ACPI Settings

Enable ACPI Auto Configuration

Enable or disable BIOS ACPI Auto Configuration.

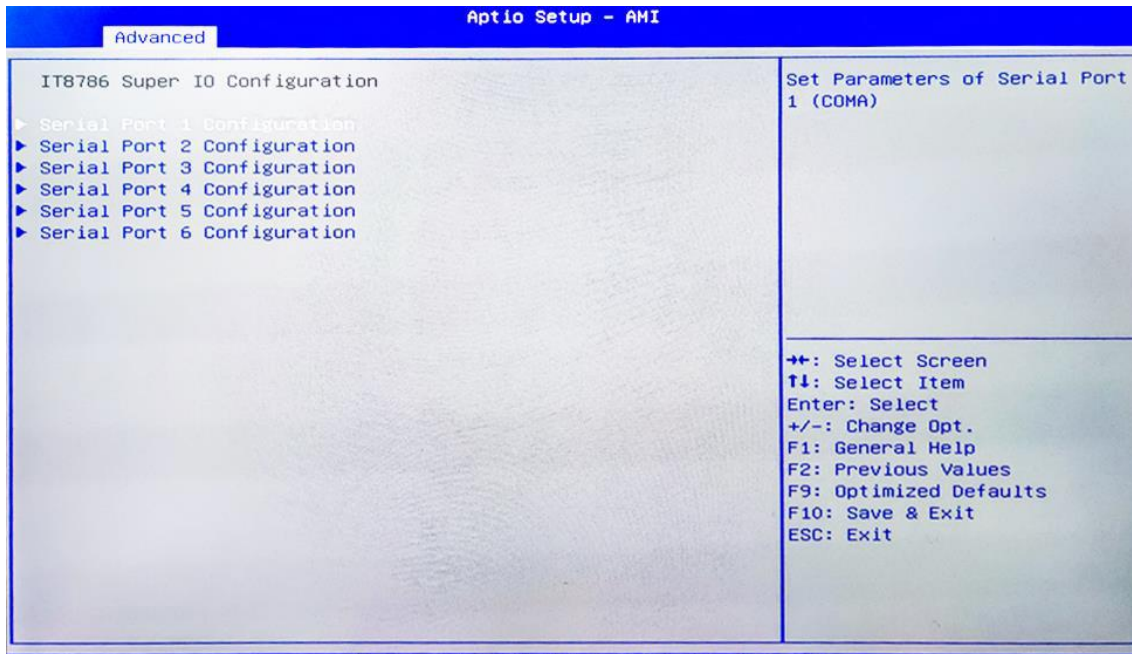

Enable Hibernation

Enable or disables the ability to hibernate.

ACPI Sleep State

Select the highest ACPI sleep state the system will enter when the SUSPEND button is pressed.

6.3.6 IT8786 Super IO Configuration

Serial Port 1 Configuration

Set parameters of serial port 1.

Serial Port 2 Configuration

Set parameters of serial port 2.

Serial Port 3 Configuration

Set parameters of serial port 3.

Serial Port 4 Configuration

Set parameters of serial port 4.

Serial Port 5 Configuration

Set parameters of serial port 5.

Serial Port 6 Configuration

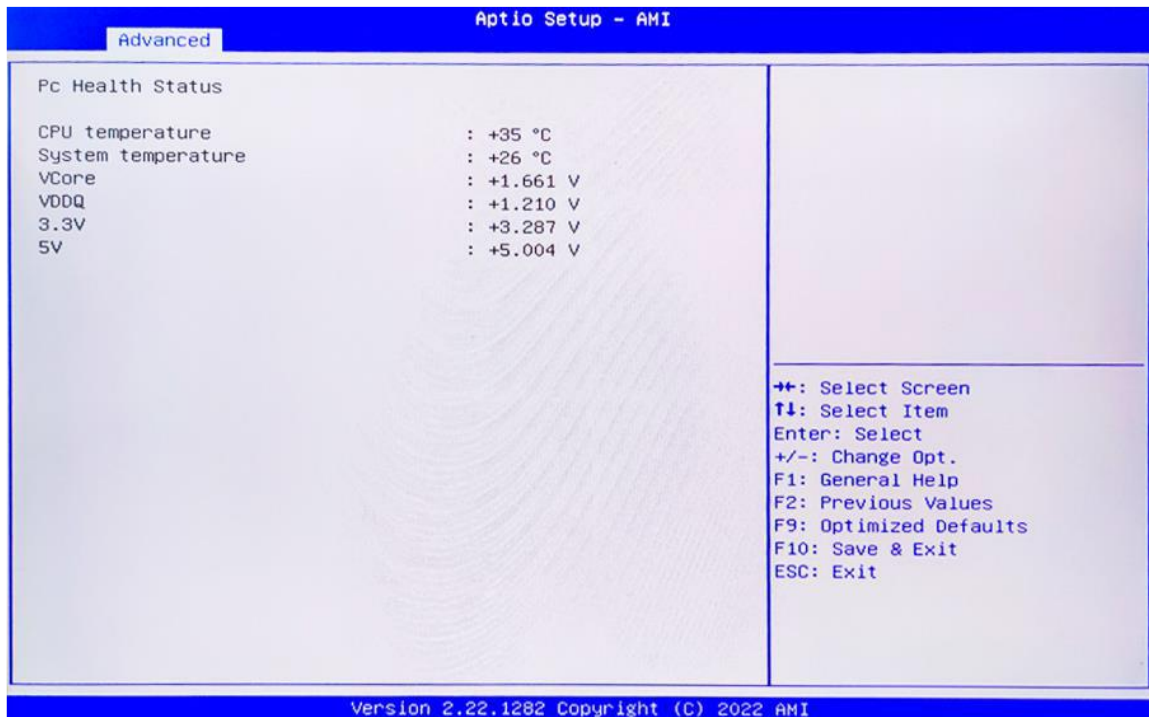

Set parameters of serial port 6.

Serial Port: Enable or disable serial port (COM).

Device Setting (Read-only): Displays serial ports' interrupt and location.

Change Setting: Change serial port settings and suggest setting "Auto" as default.

6.3.7 Hardware Monitor

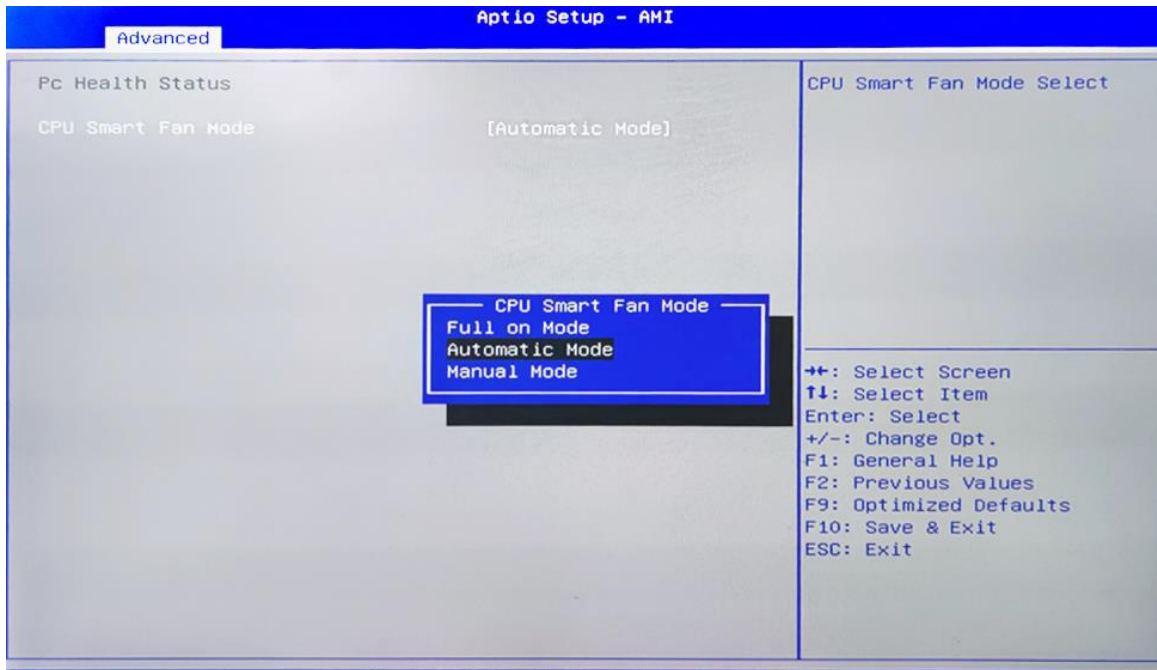

PC Health Status

The PC health status displays CPU temperature, system temperature, fan speed, and other relevant voltage values. The above parameters have a certain range, and the system cannot run beyond these ranges.

- CPU Temperature
- System Temperature
- VCore: Core Voltage
- VDDQ: RAM Voltage
- +3.3V: 3.3V
- +5V: 5V

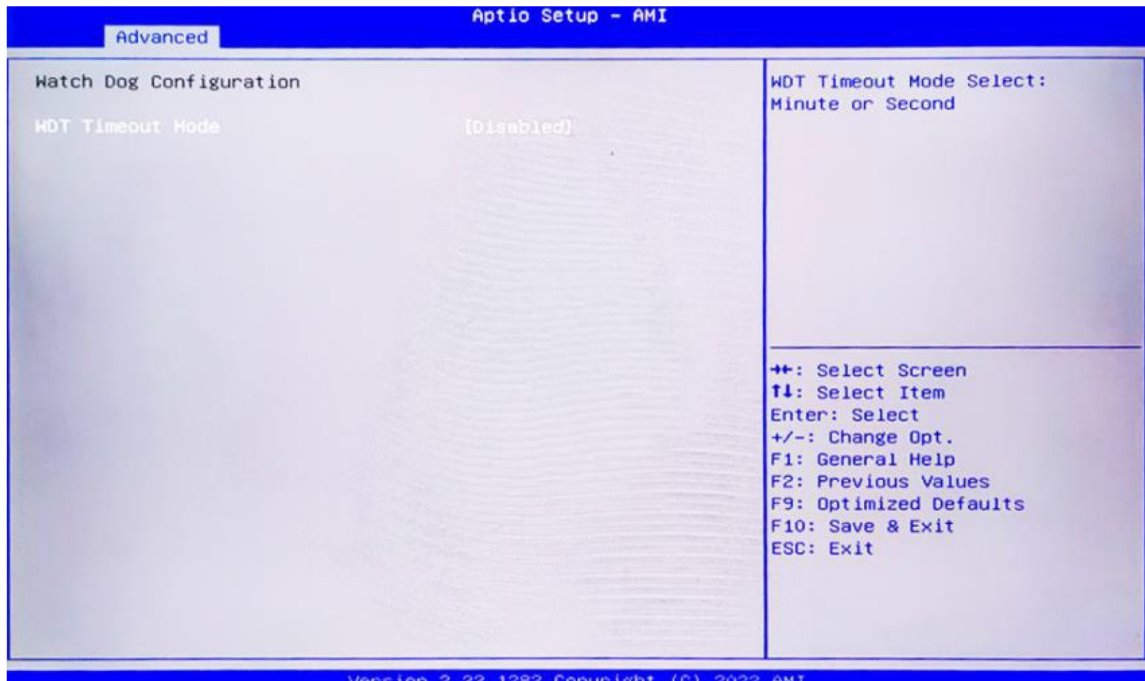

6.3.8 Smart Fan Function

Smart Fan Mode:

- Automatic Mode
- Full-on Mode
- Manual Mode

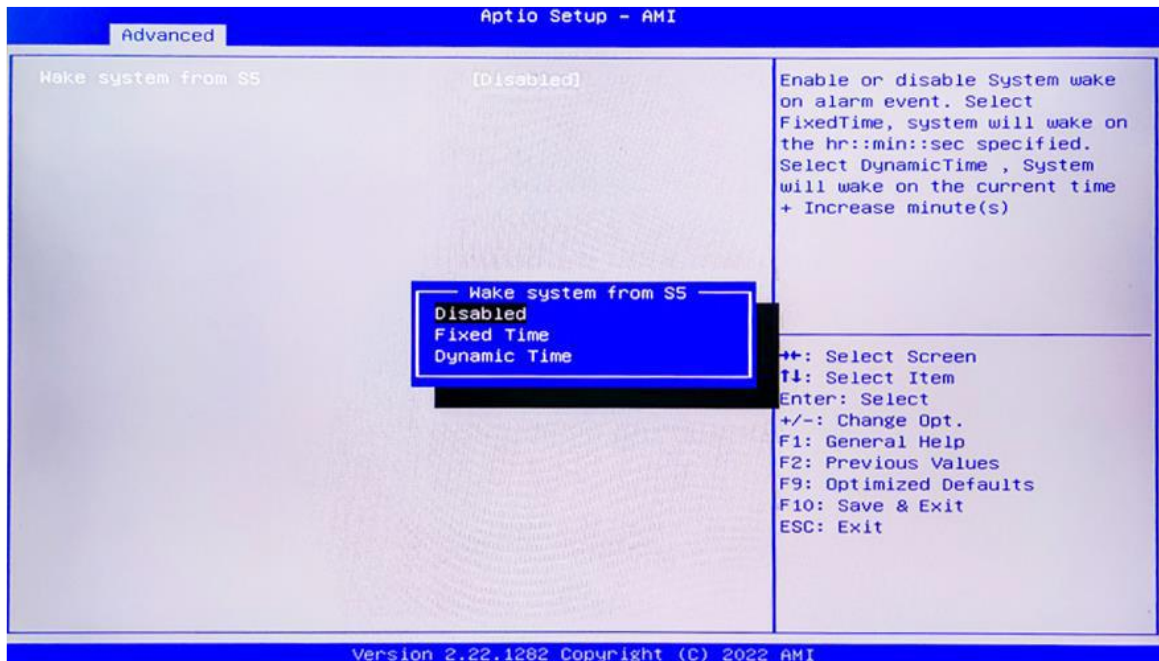

6.3.9 Watch Dog Configuration

Watch Dog Configuration

WDT Timeout Mode select: Minute or Second

6.3.10 S5 RTC Wake Settings

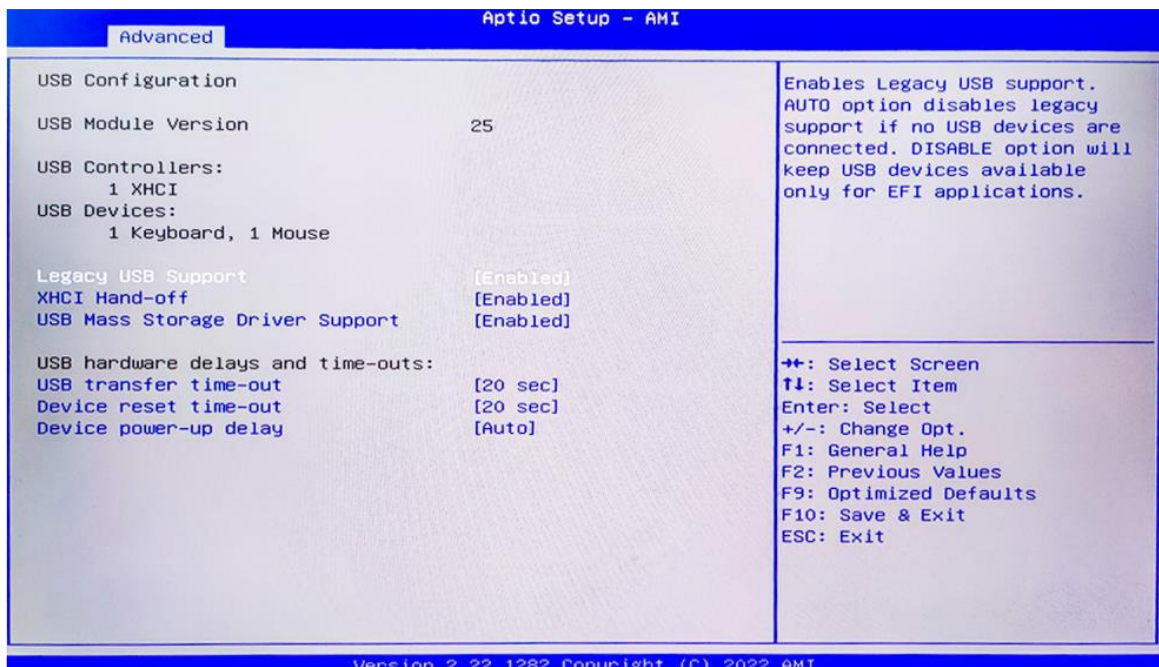

Wake System from S5: timing boot settings, disabled by default.

Fixed Time: Select Fixed Time and the system will wake on the Hr: Min: Sec specified.

Dynamic Time: Select Dynamic Time and the system will wake on a dynamic time.

6.3.11 USB Configuration

Legacy USB Support

Enable Legacy USB support. Disables legacy support if no USB devices are connected. Select enable will keep USB devices available under UEFI's support.

XHCI Hand-off

A workaround for OS without XHCI hand-off support. The XHCI ownership change should be claimed by the USB XCHI driver.

USB Mass Storage Driver Support

Enable(default) or disable USB Mass Storage Driver Support.

USB transfer time-out

Time-out value for control, bulk, and interrupt transfers, default time:20 second.

Device reset time-out

USB mass storage device start unit command time-out, default time:20 second.

Device Power-up Delay

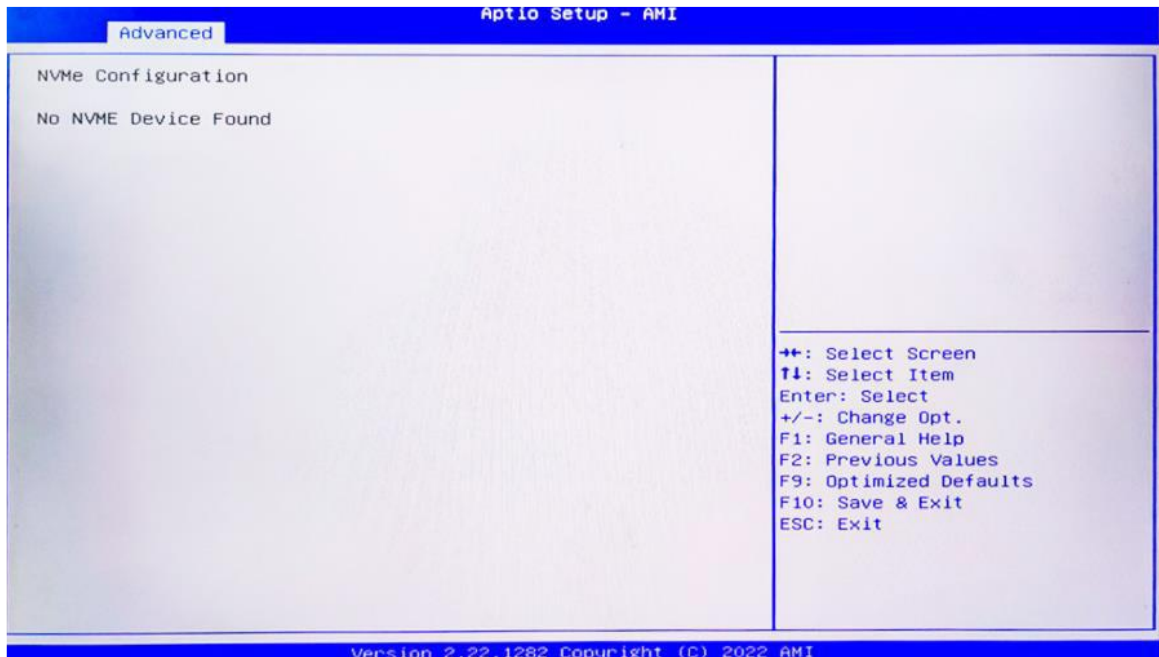

Maximum time the device will take before it properly reports itself to the host controller.

6.3.12 Network Stack Configuration

**Network Stack**

PXE Network boot setting, disabled by default.

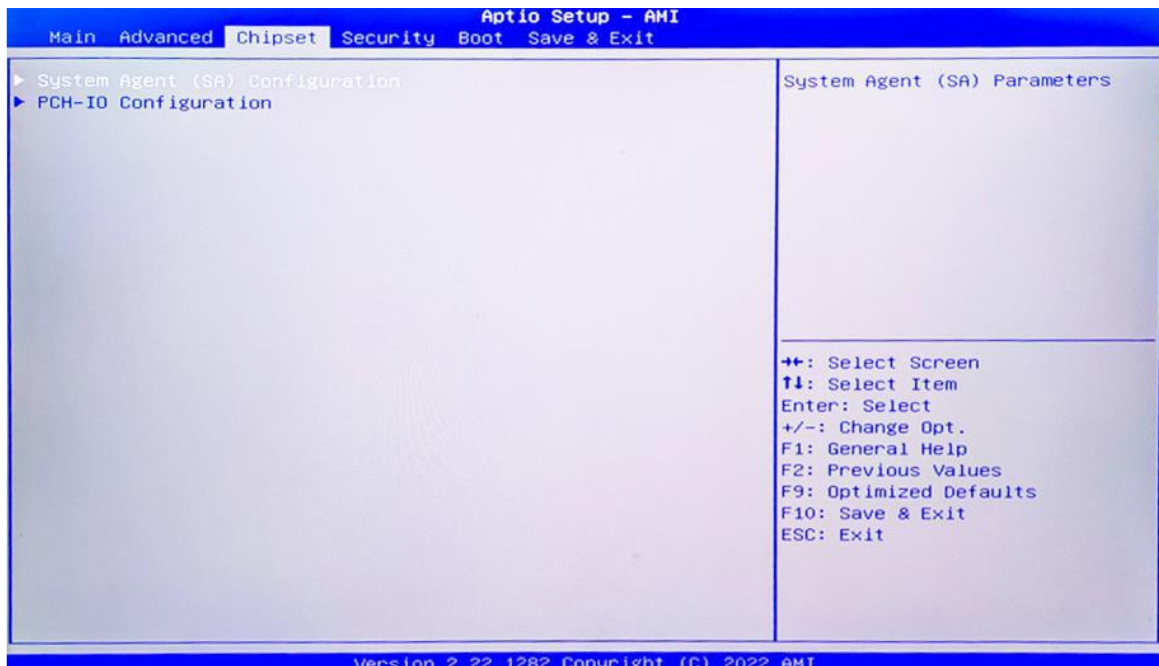

6.3.13 NVMe Configuration

The capacity and model of the SSD will be displayed under the option after the NVMe protocol SSD has been installed.

6.4 Chipset

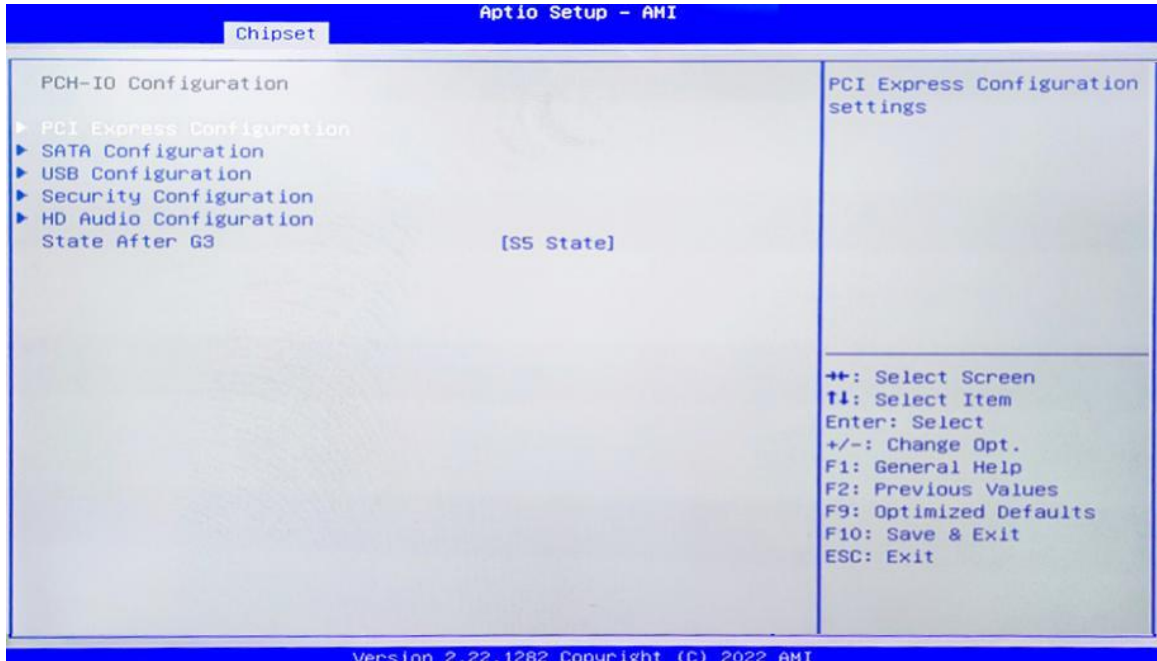

Select the chipset tab from the setup screen to enter the chipset BIOS Setup screen.

System Agent (SA) Configuration: Northbridge configuration options, including video memory, display devices, and other options.

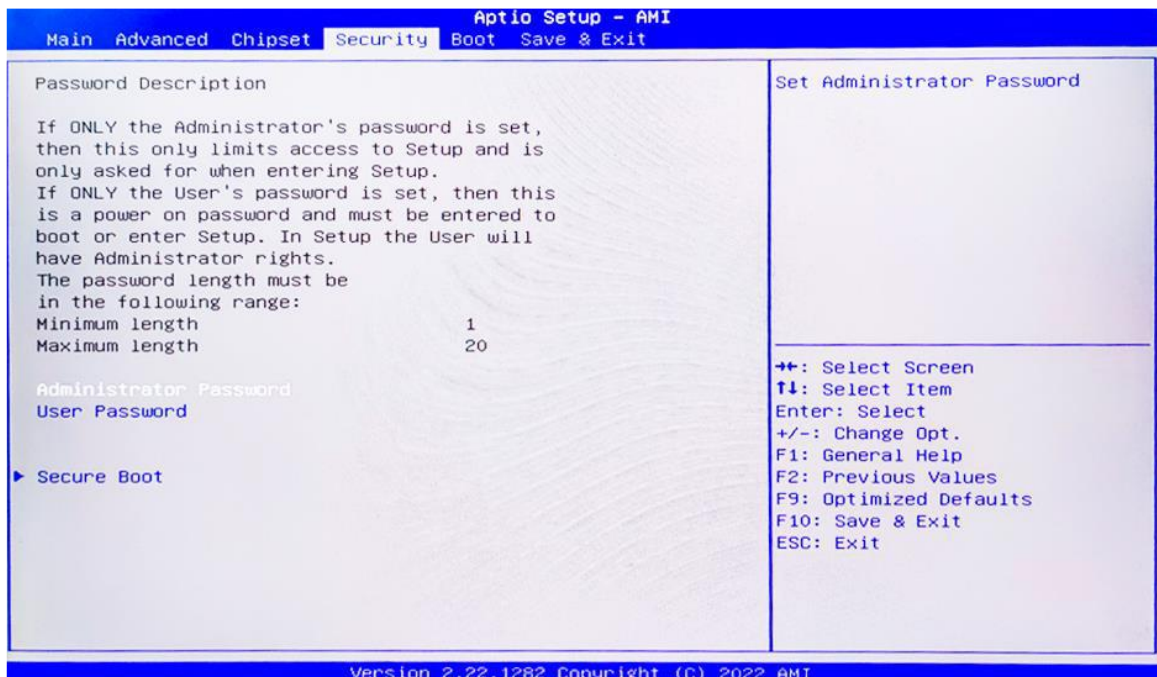

PCH-IO Configuration: Southbridge configuration options, including hard disk, sound card equipment, and other options

6.4.1 State After G3

State After G3 is set to S0 State (auto-start after power-on)

6.5 Security

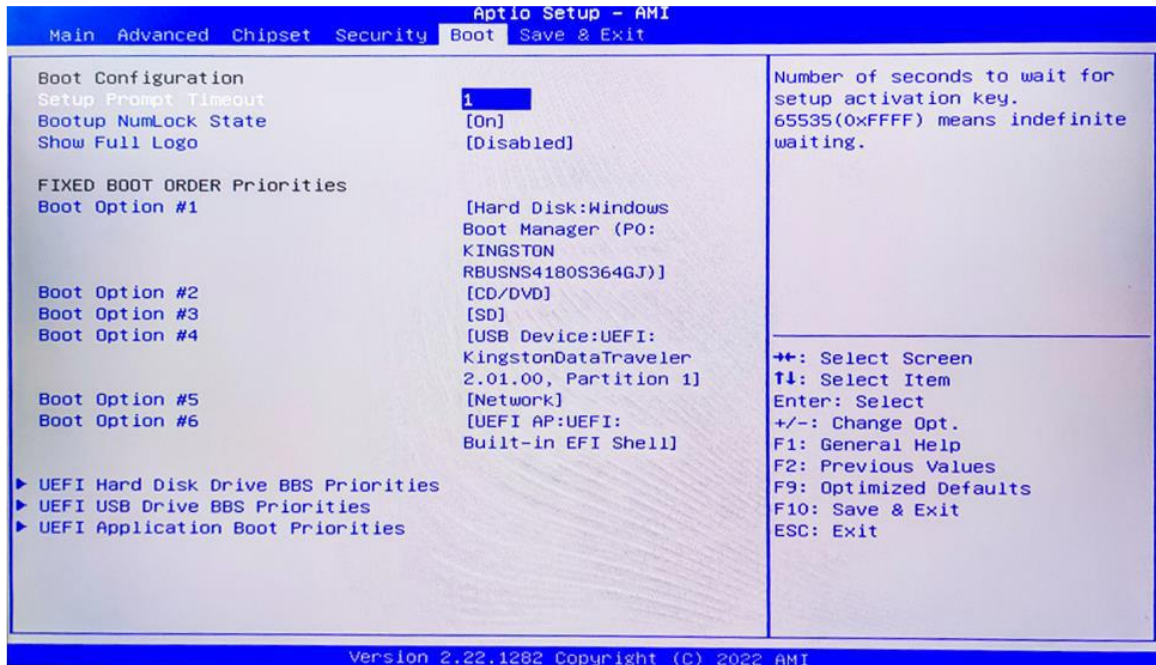

Administrator Password: Set the Administrator Password.

User Password: Set User Password.

Secure Boot: Secure boot

6.6 Boot

Setup Prompt Timeout:

Number of seconds that the firmware will wait before initiating the original default boot selection. A value of 0 indicates that the default boot selection is to be initiated immediately on boot. A value of 65535(0xFFFF) indicates that firmware will wait for user input before booting. This means the default boot selection is not automatically started by the firmware.

Bootup NumLock State:

Select the keyboard NumLock state

Show Full Logo:

Enabled/Disabled Displays customized boot logo.

Boot Option #1~#6:

Set the system boot order from Number 1 to Number 6.

UEFI Hard Disk Drive BBS Priorities:

UEFI hard drive boot priorities setting.

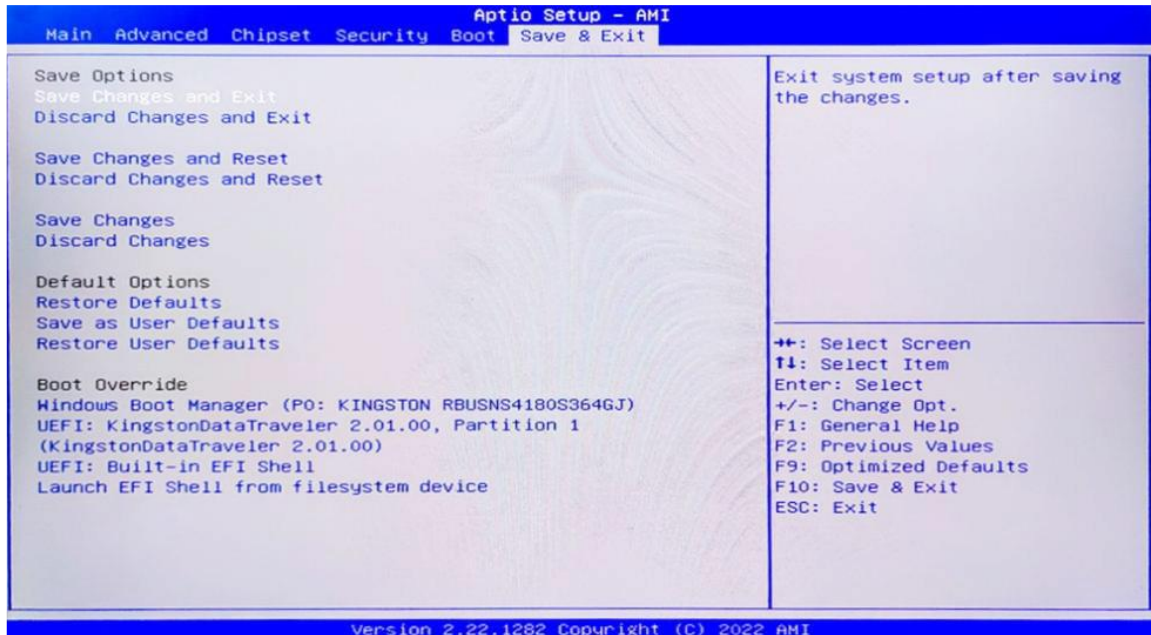

UEFI USB Drive BBS Priorities:

UEFI USB device boot priorities setting.

UEFI Application boot Priorities:

UEFI application boot priority.

6.7 Save and exit

Save Changes and Exit:

Exit the system setup after saving the changes and continue to start the computer.

Discard Changes and Exit:

Exit the system setup without saving any changes and continue to start the computer.

Save Changes and Reset:

Reset the system after saving the changes.

Discard changes and Reset:

Reset the system without saving any changes.

Save Changes:

Save changes done so far to any of the options.

Discard Changes:

Discard changes done so far to any of the options.

Restore Defaults:

Restore/load default values for all the options.

Save as User Defaults:

Save the changes done so far as the user defaults.

Restore User Defaults:

Restore the user defaults to all the options.

Boot Override:

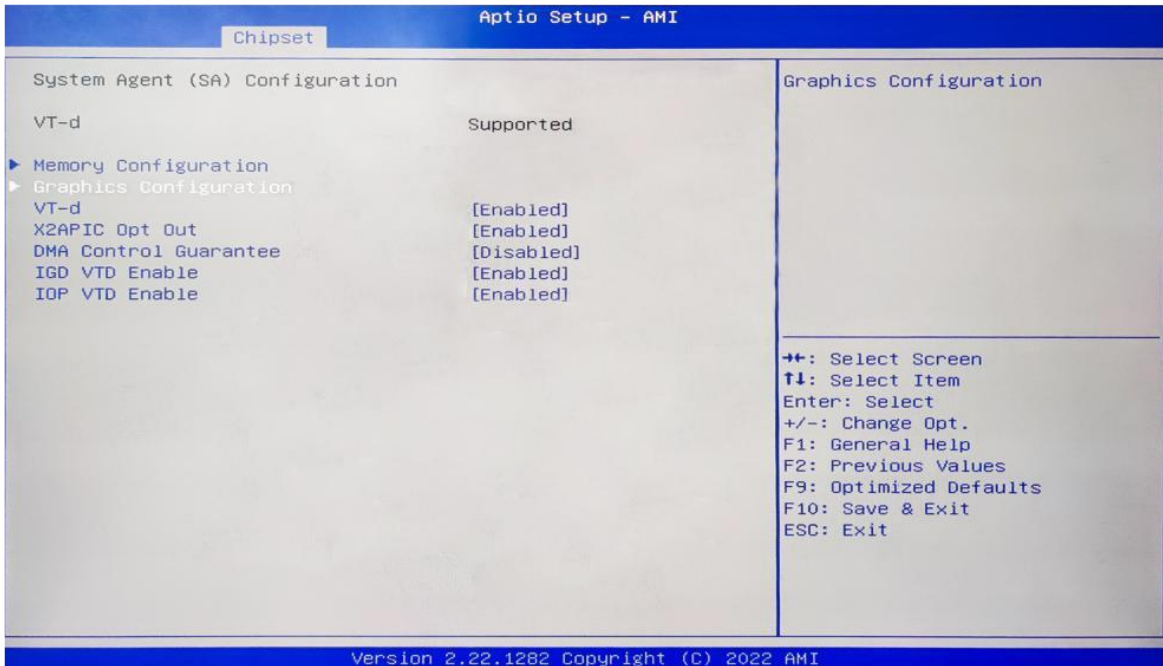

Boot device selection can override your boot priority. Select the specified boot device such as SATA, USB Flash Disk, EFI Shell, PXE, etc., and boot directly. Or press F11 boot by selecting the specified boot device.

6.8 Steps for EHL35V20 LVDS Adjustment under the BIOS

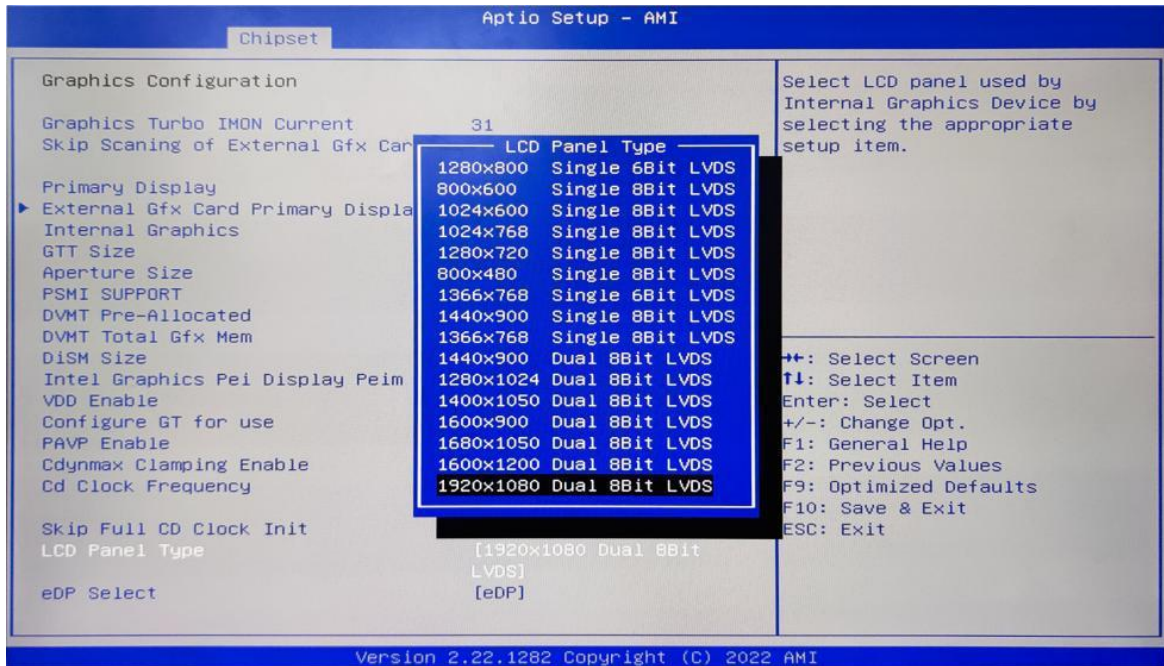

Press the DEL key entering the BIOS, and use the arrow keys to move around and select Chipset. Then select the "System Agent (SA) Configuration". Press Enter as shown below:

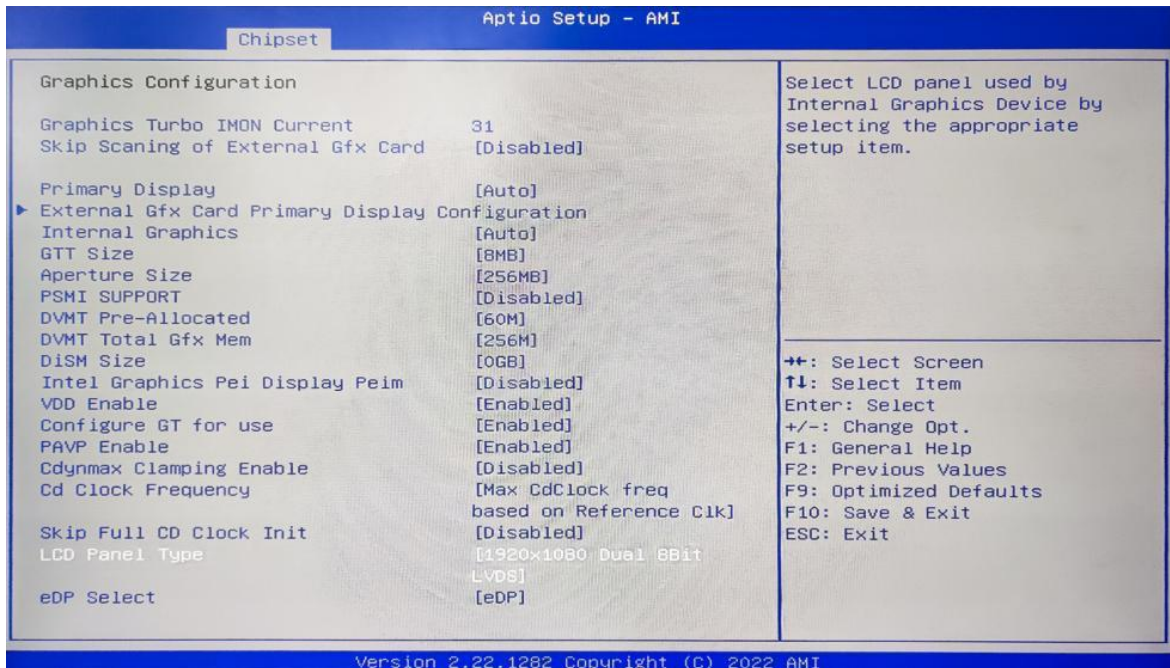

Select "Graphics Configuration" Press Enter as shown below:

Select "LCD Panel Type" Press Enter, and select the resolution that matches the screen datasheet as shown below:

After selecting the matching resolution then press F10 to save and exit, as shown below:

The option "eDP Select" can be set as close and open the LVDS. (Close LVDS: No eDP, open LVDS: eDP).
